About Me

A passionate Fullstack Engineer with over 5 years of experience building reliable web applications and internal institutional systems. My core foundation lies in PHP (Laravel) and JavaScript, but my recent focus is dedicated to mastering the Go (Golang) ecosystem, having successfully shipped 4 production APIs over the last two years. I am a highly adaptable engineer who thrives on continuous learning, leveraging modern AI-assisted workflows to accelerate development velocity and bridge knowledge gaps quickly. Committed to project ownership and continuous skill growth, I am eager to contribute a strong work ethic and a dedicated learning mindset to a forward-thinking engineering team.

Education

STIKI MALANG

August, 2016 – December, 2023

Bachelor of Informatics Engineering

Thesis : Rancang Bangun Aplikasi Travel Berbasis Android

Working Experiences

Web Developer, Universitas PGRI Adi Buana Surabaya

August, 2023 – Present

- Initiated the university's transition from legacy direct database architecture to structured APIs.
- Designed and evolved Unipasby-Services (v1 to v2) using Go (Golang) to offload heavy queries that previously strained the core ERP system.
- Developed and maintained the underlying API services connecting the university's modern web ecosystem, including Student Hub, SI OBE, Keuakad Blast, SI REWARD, SIKAYLA, and SIPULAN.
- Contributed to system stability by implementing database indexing and SQL query tuning, assisting in cutting average response times by up to 40% for over 5000 active users.

Software Developer, Strugg House

November, 2019 – Present

- Founded the software house and took hands-on ownership of backend development; taught myself and deployed a reliable Point of Sale (POS) API using Go (Golang) to ensure fast, low-latency transaction processing for retail clients.
- Coordinated end-to-end delivery of custom client management portals, building internal operational APIs with Go and modern frontends using Nextjs to handle purchasing pipelines and corporate internal dashboard.
- Adopted modern AI-assisted engineering workflows to rapidly prototype backend features and accelerate deployment cycles, ensuring client requirements were met under tight timelines.

Project Experiences

NFI (Neo Feeder Importer) – API PDDIKTI Integration, Adi Buana

January, 2024 – May, 2024

- Developed Neo Feeder Importer (NFI), a specialized data integration layer designed to establish direct, two-way data synchronization with the official PDDIKTI Neo Feeder API.
- Eliminated the manual, error-prone workflow of exporting and importing data files through the government portal, reducing manual data entry by 90% for academic staff.
- Gained deep practical experience in managing complex data schema mappings and external API error handling, ensuring seamless government compliance reporting.

Unipasby-Services (v1 to v2) – Internal University API Gateway, Adi Buana

Sept, 2025 – May, 2026

- Developed and evolved the university's core internal API layer using Go (Golang), transitioning from an initial experimental framework (v1) to a streamlined production gateway (v2).
- Successfully offloaded heavy data query bottlenecks from the legacy system, preventing the institutional ERP from collapsing under high-volume academic requests.

Integrated Academic Platforms - Nextjs Ecosystem Frontends, Adi Buana

August, 2024 – May, 2026

- Engineered and maintained the modern web user interfaces for critical campus platforms, including Student Hub, SI OBE, Keuakad Blast, and SIREWARD, utilizing Nextjs.
- Architected the WhatsApp notification engine with Keuakad Blast, successfully integrating the enterprise Qontak API to automate high-volume institutional broadcasting and real-time communication tracking.
- Collaborated closely across the full stack by actively developing and extending backend API endpoints whenever new frontend features or data schemas required support.

Additional Information

Technical & Soft Skills: Golang, Nextjs, Laravel, Flutter, SQL, Python, Tableau, Problem Solving, Attention to Detail.

Certification:	1. TOEIC (score: 920), International Test Center	27/08/2020
	2. Web Developer Level VI , Professional Certification Board of STIKI MALANG	05/10/2020
	3. Certificate of Achievement , RevoU Data Analytics Bootcamp	04/05/2024
